1 Hypotheses Tests: Lost wallet situation

Scenario: Individual A works in the reception of a large public office. One day a person comes up to the reception desk, hands over a wallet to Individual A and says: "Hi, I found this on the street around the corner. Somebody must have lost it. I'm in a hurry and must go. Can you please take care of it?" The person who handed in the wallet then leaves. Individual A inspect the wallet and finds that it contains three identical business cards, a grocery list, and a key. Moreover:

- the wallet contains no money, or
- the wallet contains 13.45 \$, or
- the wallet contains 94,15 \$.

For each of these three variants of the scenario, Individual A must decide whether to:

- notify the owner of the wallet; or
- take the wallet, including the money contained in it.

Half of the subjects in the experiment presented with the lost wallet situations has to indicate to what degree the possible behaviors presented above are social appropriate or socially inappropriate on a 5 or 7 point scale. The social appropriate behavior is defined as a behavior that most people agree is the correct/proper or ethical; in other words, if a person were to select a socially inappropriate choice, then someone else might be angry at the person for doing so. The other half are instead asked to indicate the degree to which each possible behaviour is appropriate or inappropriate based on their personal opinion independently of the opinion of other using the same 5 or 7 point scale.

1.1 Results

Table 1: Inappropriateness of not returning (5 scale)

	Obs	Proportion	Std. Error	P-value (H0: Pr=0.5, H1: Pr>0.5)
Social appropriateness	200	.975	.011	0
Personal appropriateness	194	.9948	.0051	0

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 2: Inappropriateness of not returning (7 scale)

	Obs	Proportion	Std. Error	P-value (H0: Pr=0.5, H1: Pr>0.5)
Social appropriateness	201	1	0	0
Personal appropriateness	200	.995	.005	0

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 3: Comparing the inappropriateness of not returning when wallet contains small money or no money (5 scale - t-tests)

	Mean (1)	Mean (2)	Diff.	P-value (H0: diff=0, H1:diff<0)
Social appropriateness				
Small money - No money	-.9167	-.8965	-.0202	.0789
Personal appropriateness				
Small Money - No money	-.9433	-.9046	-.0387	.008

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 4: Comparing the inappropriateness of not returning when wallet contains small money or no money (5 scale - rank sum test)

	Obs (1)	Obs (2)	Z-stat	P-value	P-value (exact) (H0: diff=0, H1:diff<0)
Social appropriateness					
Small money - No money	198	198	-1.198	.116	.114
Personal appropriateness					
Small Money - No money	194	194	-2.412	.008	.009

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 5: Inappropriateness of not returning increasing in monetary content (5 scale - t-tests)

	Mean (1)	Mean (2)	Diff.	P-value (H0: diff=0, H1:diff<0)
Social appropriateness

	Diff.	P-value
Social appropriateness		
No money vs small money	.0547	.9242
No money vs big money	.1393	.0405
Small money vs big money	.0846	.4685
Personal appropriateness		
No money vs small money	.045	.9874
No money vs big money	.09	.3927
Small vs big money	.045	.9874

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

2 Hypothesis Tests: Day Care Center situation

Scenario: Individual A has a three-year old child who attends a local day-care center. The center is scheduled to operate every day from half past seven in the morning until four in the afternoon, when the parents are supposed to come and collect their children. If a parent is late and arrives after four, a teacher stay at the center with the concerned children. Additionally:

- There is no fine for being late ; or
- Parents have to pay a fine of \$1 for a delay of 10 minutes or more.
- Parents have to pay a fine of \$10 for a delay of 10 minutes or more.

In each of these three variants of the scenario, Individual A can:

- Arrive before 4:00 pm (not late);
- Arrive at 4:15 pm (15 min late), and pay a fine of \$1 or \$10
- Arrive at 4:30 pm (30 min late), and pay a fine of \$1 or \$10

Some subject in the experiment presented with the day-care scenario has to indicate to what degree the possible behaviors presented above are social appropriate or socially inappropriate on a 5 or 7 point scale. The social appropriate behavior is defined as a behavior that most people agree is the correct/proper or ethical; in other words, if a person were to select a socially inappropriate choice, then someone else might be angry at the person for doing so. Other subjects are instead asked to indicate the degree to which they each possible behaviour is appropriate or inappropriate based on their personal opinion independently of the opinion of other using the same 5 or 7 point scale.

2.1 Results

Table 13: Inpropriateness of arriving late (5scale)

	Obs	Proportion	Std. Error	P-value (H0: Pr=0.5, H1: Pr>0.5)
Social appropriateness	200	.93	.018	0

No fee vs big fee	.165	.0086
Small vs big fees	.075	.6272

3 Hypotheses and Tests: Gender Differences

The tables below present tests to the hypotheses that women will be more accurate at guessing the social appropriateness rating of others (H0: diff =0, H1: diff<0), and that it is not the case that women’s personal ratings are more likely (than men’s personal ratings) to be the same as the most frequent appropriateness rating made by others.

Table 27: Gender differences in social appropriateness (5 scale - t-tests)

	Obs.	Mean (men)	Mean (women)	Diff.	P-value
Lost wallet situation	200	0.8711	0.8688	0.0023	0.5251
Day care situation	200	0.4560	0.4681	-0.0121	0.4028

* p<0.05, ** p<0.01, *** p<0.001

Table 28: Gender differences in social appropriateness (5 scale - rank sum test)

	Obs (Men)	Obs (Women)	Z-stat	P-value	P-value (exact) (H0: diff=0, H1:diff<0)
Lost wallet situation	106	94	-.09	.464	.47
Day care situation	106	94	-.24	.405	.405

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 29: Gender difference in social appropriateness (7 scale - t-tests)

	Obs.	Mean (men)	Mean (women)	Diff.	P-value
Lost wallet situation	201	0.7810	0.7205	0.0605	0.8834
Day care situation	201	0.4036	0.3872	0.0164	0.6778

* p<0.05, ** p<0.01, *** p<0.001

Table 30: Gender difference in social appropriateness (7 scale - rank sum test)

	Obs (Men)	Obs (Women)	Z-stat	P-value	P-value (exact) (H0: diff=0, H1:diff<0)
Lost wallet situation	102	99	1.455	.927	.929
Day care situation	102	99	.435	.668	.668

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 31: Gender difference in personal appropriateness (5 scale - t-tests)

	Obs.	Mean (men)	Mean (women)	Diff.	P-value
Lost wallet situation	194	0.8577	0.8984	-0.0407	0.1482
Day care situation	194	0.4494	0.5381	-0.0887	0.0351

* p<0.05, ** p<0.01, *** p<0.001

Table 32: Gender difference in personal appropriateness (5 scale - rank sum test)

	Obs (Men)	Obs (Women)	Z-stat	P-value	P-value (exact) (H0: diff=0, H1:diff<0)
Lost wallet situation	89	105	-1.126	.13	.134
Day care situation	89	105	-1.817	.035	.035

Notes. P-value equals to 0 in the last column means that $p < 0.001$.

Table 33: Gender differences in personal appropriateness (7 scale - t-tests)

	Obs.	Mean (men)	Mean (women)	Diff.	P-value
Lost wallet situation	200	0.7340	0.8053	-0.0713	0.0876
Day care situation	200	0.3434	0.3696	-0.0262	0.2306

* p<0.05, ** p<0.01, *** p<0.001

Table 34: Gender differences in personal appropriateness (7 scale - rank sum test)

	Obs (Men)	Obs (Women)	Z-stat	P-value	P-value (exact) (H0: diff=0, H1:diff<0)
Lost wallet situation	99	101	-.956	.17	.169
Day care situation	99	101	-.578	.282	.282

4 Order Effects

For each action in each scenario, compare (i) average rating by subjects who saw that scenario as the first scenario in the set of three scenarios to which it belong, with (ii) average rating by all other subjects who saw that scenario (under the same number of rating alternatives and the same mode of appropriateness). Use a t-test to compare the average ratings of these two groups.

For example, consider the rating of the action of being 15 minutes late in the small money day-care center scenario.

Compare (i) subjects who faced this scenario before they faced any other day-care center scenarios, with (ii) all other subjects who faced these scenarios with the same number of rating alternatives and the same mode of appropriateness.

4.1 Social appropriateness

Table 35: Test at level of questions/actions: lost wallet situation (5 scale - t-tests)
